

Thewis Currant Ranch, LLC
2011 Yields Variety and Mulch Type
Harvested July 16, 2011

Variety	Mulch Type	Yield – pounds/acre
Willoughby	Fabric	1,307
Willoughby	Grass Clippings	828
Willoughby	Wood Chips	1,055
Willoughby	Silo Plastic	827
Average Yield		1,004
Titania	Grass Clippings	1,176
Titania	Wood Chips	1,655
Titania	Fabric	1,292
Average Yield		1,374

Yields were determined by harvesting three random 10 foot plots for each mulch treatment for both Willoughby and Titania varieties. Plants were only picked one time, and all berries were picked that were showing color. These are for demonstration only. Field and varieties were not randomized throughout the field.

Other factors must also be considered such as evenness of ripening, ease of picking, etc. First year production yields may also not be indicative of mature plant yields.
